

VIJAY J

AWS DevOps Engineer | 4 Years Experience
8525909241 • vijayjob287@gmail.com • Bangalore, India

PROFESSIONAL SUMMARY

AWS Certified DevOps Engineer with 4 years of hands-on experience architecting, automating, and managing secure, scalable cloud infrastructure on AWS. Skilled across the full DevOps lifecycle — infrastructure-as-code, CI/CD pipeline design, container orchestration, serverless computing, and production observability. Demonstrates a consistent track record of reducing deployment time, improving system reliability, and driving measurable cost savings through automation and cloud-native best practices. A collaborative team player who thrives in agile environments and communicates effectively across engineering and product teams.

TECHNICAL SKILLS

Cloud	AWS (EC2, S3, VPC, Lambda, ECS, EKS, RDS, CloudFormation, CloudWatch, IAM, Route 53, SNS, SQS), Azure
Containers	Docker, Kubernetes (EKS, self-managed) — orchestration, Helm charts, rolling deployments, node management
IaC	Terraform, AWS CloudFormation — modular design, state management, remote backends
CI/CD	Jenkins, AWS CodePipeline, CodeBuild, CodeDeploy, Git, GitHub, GitLab
Monitoring	AWS CloudWatch Logs & Metrics, OpenSearch (Elasticsearch), Grafana, Prometheus
Scripting	Bash / Shell Scripting, Python, YAML
Security	IAM roles & policies, Security Groups, VPC NACLs, Secrets Manager, AWS Config
OS	Linux (Ubuntu, Amazon Linux, CentOS), Windows Server
Collaboration	Jira, ServiceNow, Slack, Microsoft Teams, Outlook, Confluence

WORK EXPERIENCE

Searchblox Software Inc.

DevOps Engineer

Bangalore, India

March 2022 – Present

- Designed and managed end-to-end AWS cloud environments for multiple SaaS products, ensuring high availability, fault tolerance, and security compliance across all environments.
- Automated infrastructure provisioning with Terraform (IaC), reducing environment setup time by ~40% and eliminating configuration drift across dev, staging, and production.
- Orchestrated containerized microservices on Kubernetes (EKS), enabling seamless horizontal scaling, rolling deployments, and self-healing workloads with zero downtime.
- Built and optimized multi-stage CI/CD pipelines in Jenkins and AWS CodePipeline integrating automated unit tests, security scans, and approval gates — reducing release cycle time significantly.
- Containerized legacy monolithic applications into Docker-based microservices, standardizing deployment across all environments and improving developer onboarding speed.
- Developed AWS Lambda serverless functions to automate routine operational tasks (log rotation, snapshot cleanup, notifications), reducing infrastructure overhead and cutting compute costs.
- Configured and maintained OpenSearch (Elasticsearch) clusters for centralized log aggregation, full-text search, and real-time alerting on application anomalies.

- Set up CloudWatch dashboards, metric alarms, and SNS notification channels for proactive incident detection, reducing mean time to detect (MTTD) production issues.
- Managed GitHub repositories with structured branching strategies (GitFlow), enforced pull request reviews, and maintained release tagging for full deployment traceability.
- Implemented IAM roles, Security Groups, and VPC NACLs following the principle of least privilege, strengthening the overall cloud security posture.
- Administered Kubernetes RBAC policies and network policies across namespaces to isolate workloads and enforce CI/CD pipeline access controls.
- Collaborated with development teams to identify deployment bottlenecks, define SLAs, and establish runbooks for on-call incident response procedures.
- Participated in sprint planning, daily standups, and retrospectives — contributing DevOps perspectives to backlog grooming and release planning sessions.

KEY PROJECTS

Cloud Infrastructure Automation | [Terraform](#) · [AWS](#) · [Jenkins](#) · [GitHub](#)

Led the design and rollout of a fully automated infrastructure provisioning system using Terraform modules, reducing manual cloud setup from days to under an hour. Integrated the pipeline with Jenkins for plan/apply approvals and GitHub for version-controlled state management.

Microservices Migration & Kubernetes Adoption | [Docker](#) · [Kubernetes \(EKS\)](#) · [Helm](#) · [AWS](#)

Drove containerization of a multi-service application from bare EC2 to Docker + EKS. Wrote Helm charts for each service, configured Horizontal Pod Autoscalers, and implemented health probes — resulting in improved resource utilization and near-zero deployment downtime.

Centralized Observability Platform | [OpenSearch](#) · [CloudWatch](#) · [Grafana](#) · [Prometheus](#)

Built a unified logging and monitoring stack integrating OpenSearch for log analytics, Prometheus for metrics collection, and Grafana dashboards for real-time visibility. Enabled the team to proactively catch performance regressions before they impacted end users.

CERTIFICATIONS

AWS Certified DevOps Engineer – Professional — Amazon Web Services

EDUCATION

Bachelor of Computer Applications (BCA)

2020 | 74.2%

Arignar Anna College, Krishnagiri | Periyar University

Higher Secondary Certificate (HSC)

2017 | 62%

Govt. Higher Secondary School, Ullugurukkai | Tamil Nadu State Board

SSLC (10th Standard)

2015 | 72%

Govt. Higher Secondary School, Ullugurukkai | Tamil Nadu State Board

KEY COMPETENCIES

Cloud Infrastructure Design • CI/CD Automation • Container Orchestration • Infrastructure as Code • Serverless Computing • Log Management & Monitoring • Incident Response • Cost Optimisation • Git Version Control • Linux Administration • Security & Compliance • Agile/Scrum Delivery • Cross-team Collaboration
